

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

Rabies in Michigan, 2007

	Case #	Date	County	Species	Comments
1.	M07RA00126	2/5/2007	Wayne	Horse	A horse at a race track experienced anorexia and behavioral changes, most notably aggression. The horse also started to experience a fever. The horse’s aggression caused it to bite at its trainer and groomer. The horse was taken to a hospital and was treated for herpes virus. As the horse continued to decline, the horse was euthanized and tested for rabies. The test came back positive for rabies. Ten people were exposed to the horse and underwent PEP. One horse was exposed to rabid horse as this moved to a different state it was reported to that state. It was advised that all the horses at the racetrack be vaccinated against rabies.
2.	M07RA00329	3/12/2007	Livingston	Dog	An unvaccinated female dog was exhibiting signs of seizuring, salivation, depression, and sudden aggression. The dog was euthanized and tested for rabies. The dog tested positive for rabies. Nine people were exposed to the dog and underwent PEP. There two dogs that were exposed to the rabid dog. The first dog was already vaccinated, so it was reboostered and observed for 45 day. The second dog was unvaccinated, so it was euthanized.
3.	M07RA00450	3/28/2007	Ingham	Bat	A rabid bat was flying around the house at

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					night. The family (4 people) underwent PEP. There was one dog and one cat in the home they were currently vaccinated against rabies. The family also had a horse that was not currently vaccinated against rabies. The family was instructed to consult their vet for rabies vaccination.
4.	M07RA00462	3/30/2007	Eaton	Bat	A woman awoke to a rabid bat flying around in her home. As she was exposed to woman underwent PEP, no other people or animals were deemed exposed.
5.	M07RA00606	4/27/2007	Washtenaw	Bat	A cat caught a rabid bat. The cat was not vaccinated, so the cat was euthanatized. No other animal or people were deemed exposed to the bat.
6.	M07RA00696	5/14/2007	Isabella	Bat	A man awoke to a rabid bat in his slipper. The bat bit the man. His wife was also in the bedroom with the bat. They both underwent PEP. No other animals or human were exposed.
7.	M07RA00697	5/14/2007	Lapeer	Bat	A rabid bat was found outside, and a woman tried to capture it. The bat bit the woman's hand. The woman underwent PEP as she was exposed. The woman owns two rabies-unvaccinated cats that may have been exposed to the bat. Owner declined euthanasia, the two cats were placed under a 6 month quarantine and was vaccinated against at month 5 of the quarantine. As her dog was currently vaccinated it was

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					reboosted against rabies and observed for 45 days.
8.	M07RA00745	5/19/2007	Lenawee	Bat	A boy found a rabid bat lying on the sidewalk. The bat bit the kid. The boy underwent PEP, no other humans or animal were deemed exposed.
9.	M07RA00753	5/22/2007	Gladwin	Bat	A man was bit in the hand by a bat. He killed the bat and sent for testing. The bat had rabies. The man underwent PEP. No other humans or animal were deemed exposed.
10.	M07RA00799	5/29/2007	Bay	Bat	A dog that was not vaccinated against rabies was playing with a rabid bat. The dog was euthanized. No other humans or animal were deemed exposed.
11.	M07RA00832	5/31/2007	Sanilac	Cat	A kitten bit a man on the hand, then jumped out of his hands and scratched a child. The man isolated the cat and noticed increased aggression. The cat was euthanized and tested positive for rabies. The man underwent PEP, and it was recommended that the child start treatment as well. There was no other known exposure to animals or humans.
12.	M07RA00847	5/31/2007	Ionia	Bat	A dead bat with rabies was found in a bag of dog food. The dog was currently vaccinated against rabies. No humans or animal were deemed exposed.
13.	M07RA00854	6/1/2007	Eaton	Bat	A bat was found in a child’s room. The family of seven all underwent PEP. The family dog was currently vaccinated against rabies; however, it was recommended

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					that it get reboostered against rabies and observed for 45 days.
14.	M07RA00874	6/1/2007	Ionia	Bat	A bat was in the family’s barn. The bat was shot, collected, and tested. No humans were exposed to the bat. However, a stray cat that was unvaccinated against rabies may have had contact, so the cat was euthanized. There was also a dog without contact that was currently vaccinated.
15.	M07RA00918	6/5/2007	Eaton	Bat	A bat was flying in a bedroom. The person shut the bat in the room and called animal control. The bat tested positive for rabies. The person did not have contact with the bat, and her dog was currently vaccinated, although it did not have contact with the bat.
16.	M07RA00929	6/5/2007	Montcalm	Bat	A man was cleaning his gutters on his home when a rabid bat bit him. He underwent PEP treatment. No other animals or human had exposure to the bat.
17.	M07RA00974	6/8/2007	Oakland	Bat	A woman was in her home when a bat attacked her by biting and scratching her head. The bat tested positive for rabies, so she underwent PEP. No humans or animal were deemed exposed.
18.	M07RA00994	6/11/2007	Genesee	Bat	A woman found a dead bat at her door step. The bat tested positive for rabies. She was assuming that her two cats brought it there. The cat where not currently vaccinated against rabies, therefore, she decide to have them euthanized. No other

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					animals or humans were exposed.
19.	M07RA001004	6/12/2007	Macomb	Skunk	A dog attacked a skunk at the dog’s home. Animal control captured and tested the skunk for rabies. The skunk tested positive for rabies. As the dog was currently vaccinated against rabies it was revaccinated and observed for 45 days.
20.	M07RA001008	6/13/2007	Ingham	Bat	A rabid bat was flying around a couple’s home. Two people were exposed so they underwent PEP treatment. Their animals, 3 cats and 1 dog, were currently vaccinated against rabies. They were unsure if they were exposed, so the animals were reboosted and observed for 45 days. No other animals or humans were exposed.
21.	M07RA001030	6/13/2007	Muskegon	Bat	A rabid bat was flying around the family’s living room as they were sleeping. The two family cats were trying to kill the bat. The cats were not vaccinated against rabies, so they were euthanized. Five family members had possible contact with the bat. An exposed woman was pregnant and her doctor advised against PEP. An exposed man declined PEP because he had PEP a few years ago, and did not believe he was exposed. Three children underwent PEP.
22.	M07RA001044	6/15/2007	Sanilac	Bat	A bat was found in the closet in a family’s home. They saw the bat flying around their

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					<p>home, including while they were sleeping but were unable to catch it. The bat was sent to MDCH and it tested positive for rabies. Four people were exposed to the bat, so the four people underwent PEP. The family’s dog may have also been exposed. The dog was currently vaccinated against rabies so it was reboosted and observed for 45 days. There were 5 horses that were deemed unexposed and were already vaccinated. There were also 4 barn cats that were not vaccinated against rabies. They were deemed unexposed, but it was recommended that they get vaccinated.</p>
23.	M07RA001071	6/16/2007	Washtenaw	Bat	<p>A bat was flying around a bedroom at night, hit a fan and fell to the floor. The couple captured the bat and had it tested for rabies. It tested positive. The couple underwent PEP, no other animals or humans were deemed exposed.</p>
24.	M07RA001095	6/19/2007	Montcalm	Bat	<p>A bat was discovered flying around a home. It was sent in for testing and found to be positive for rabies. Three people were deemed exposed, so they underwent PEP. Two dogs were currently vaccinated against rabies, so they were reboosted and watched for 45 days. The family’s horses (not exposed) were not currently vaccinated against rabies. It was recommended that they be vaccinated.</p>

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

25.	M07RA001108	6/20/2007	Clinton	Bat	A rabid bat was flying around in a family’s home while they were sleeping. Four people may have been exposed, so they underwent PEP. There were also two dogs that were currently vaccinated against rabies so they were reboosted and observed of 45 days.
26.	M07RA001155	6/25/2007	Ingham	Bat	A rabid bat was flying around the family’s home while they were sleeping. The four family members had been deemed exposed. As they had received PEP prior from a former exposure. It was recommended that they get reboosted. The family pets were currently vaccinated against rabies, so it was recommended they get reboosted and observed for 45 days.
27.	M07RA001223	7/2/2007	Jackson	Bat	A rabid bat was discovered in the attic of the home. Two people may have been exposed to the bat so they underwent PEP. The family owns 2 cats, 1 dog all of which may have been exposed. A dog and cat were currently vaccinated against rabies, so they were reboosted and observed for 45 days. Another puppy was not currently vaccinated, so it was quarantined for 6 month quarantine and received a vaccination against rabies at 5 months into the quarantine. Another cat was not currently vaccinated against rabies. The cat was revaccinated and quarantined for 6

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					months.
28.	M07RA001264	7/5/2007	Livingston	Skunk	<p>A rabid skunk attacked a dog. The man shot and collected the skunk for testing. The skunk tested positive for rabies. The dog’s owners worked on the dog’s wound, so they decided to undergo PEP. The dog vaccination was out dated, so the dog was reboosted and quarantined for 6 months. The other dog was not currently vaccinated against rabies so the dog was reboosted. An outdoor cat may have been exposed so it was revaccinated and observed for 45 days. No other animals or humans were known to have contact with the skunk.</p>
29.	M07RA001303	7/9/2007	Macomb	Cat	<p>A feral kitten that was not vaccinated against rabies was in contact with a skunk. It was recommended that the cat be euthanized and tested. The family opted for 6 month quarantine and rabies vaccination. The kitten’s developed aggression and seizures. The kitten was euthanized and tested for rabies. The kitten tested positive for rabies. The sixteen people who were involved with the kitten’s case underwent PEP. The family owned three cats currently vaccinated against rabies cats, so they were reboosted and observed for 45 days. The local animal control tried to set traps to capture any other feral</p>

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					cats in the area.
30.	M07RA001312	7/10/2007	Shiawassee	Bat	A dog was playing outside with a rabid bat with his mouth. The owner was concerned over contact with dog saliva. So the owner opted to undergo PEP. The family had two dogs; and they were both overdue for their rabies vaccination. The owner declined euthanasia for the exposed dog, so it was revaccinated and quarantined for 6 months. The other dog that was not exposed was reboosted against rabies and observed for 45 days. There were also other animals on the premises, several horses and 2 cats, that were currently vaccinated against rabies. These animals were deemed unexposed.
31.	M07RA001351	7/12/2007	Midland	Bat	A rabid bat was found in the garage with a cat not vaccinated against rabies. The owner elected to have the cat euthanatized. No other humans or animals were deemed exposed to the bat.
32.	M07RA001354	7/13/2007	Kalamazoo	Bat	A family found a rabid bat in there infant’s hand at their home. Due to unknown exposure the whole family underwent PEP. The family owned a strictly outdoor cat which is currently vaccinated against rabies. No one else was exposed.
33.	M07RA001374	7/13/2007	Muskegon	Bat	A rabid bat was observed crawling out from under a door in a family’s home. Due to unknown exposure the 3

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					family members, underwent PEP. There were no other humans or animals exposed.
34.	M07RA001377	7/13/2007	Ionia	Bat	A rabid bat was in a family’s home while they were sleeping. The 8 potentially exposed people all underwent PEP. No animals were exposed to the bat.
35.	M07RA001379	7/13/2007	Muskegon	Bat	A man awoke to a bat flying around his bedroom. The man underwent PEP. The man owned a dog that was currently vaccinated against rabies. As the dog may have been exposed the dog was reboosted and observed for 45 days.
36.	M07RA001394	7/16/2007	Oakland	Bat	A cat was found walking around near a rabid bat. The cat was currently vaccinated against rabies, so it was reboosted and observed for 45 days. No other humans or animals were deemed exposed.
37.	M07RA001413	7/17/2007	Macomb	Bat	A family of five was outside of their home. When they went inside they found a rabid bat in their home. No people or animals were deemed exposed. The family owns 2 currently rabies vaccinated dogs that were outside that day. The family opted to revaccinated the dogs against rabies anyway.
38.	M07RA001437	7/19/2007	Manistee	Bat	A cat brought a rabid bat in the house. The cat, along with another cat, were unvaccinated against rabies. The owner elected to have both cats euthanized due to exposure with the rabid bat. No human

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					were deemed exposed.
39.	M07RA001484	7/24/2007	Clinton	Bat	A family of three awoke to a rabid bat flying around the home. They had previously undergone PEP, so they were reboosted. There were no animals deemed exposed.
40.	M07RA001499	7/25/2007	Eaton	Bat	A man came home to find a rabid bat in his home. A cat not vaccinated against rabies attacked the bat. It was advised to have to unvaccinated cat euthanized. The owner refused and opted to have the cat vaccinated against rabies and enter a 6 month quarantine. It was advised that the man go through PEP treatment since there may have been exposure. In addition, the family owned 2 dogs, and another cat that were all currently vaccinated against rabies. As these animals were alone with the bat in the home, it was advised to have these animals reboosted and observed for 45 days.
41.	M07RA001516	7/25/2007	Jackson	Bat	A family awoke to find a dead bat lying on their floor. The bat tested positive for rabies. Due to possible exposure with the bat, the family underwent PEP. The family also owned 3 dogs which were currently vaccinated against rabies. Two of the dogs were deemed unexposed. The other dog may have been exposed, so it was reboosted and observed for 45 days.
42.	M07RA001542	7/26/2007	Clinton	Bat	A family of four awoke

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					to find a bat on their floor. All family members received PEP. No animals were deemed exposed.
43.	M07RA001544	7/27/2007	Eaton	Bat	A man found a bat on the front porch of the house. The outdoor cat, which was not vaccinated against rabies, most likely attacked the bat and put it on the porch. It was advised that the cat be euthanized. The owner refused and opted to vaccinate the cat and quarantine it for 6 months. The man also owns two dogs and one indoor cat. The dogs were currently vaccinated but the cat had never been vaccinated against rabies. As the dogs may have had contact with the bat when they were let outdoors they were reboosted and observed for 45 days. The cat was vaccinated against rabies. No other animals or humans were deemed exposed.
44.	M07RA001557	7/27/2007	St Clair	Bat	Two cats were playing with a rabid bat. The cats were not vaccinated against rabies, so the owner elected to euthanize them. No humans were exposed.
45.	M07RA001558	7/30/2007	St Clair	Bat	A man came home to find a rabid bat flying around his house while his wife and children were sleeping. The wife and 3 kids all underwent PEP. The family dog was currently vaccinated against rabies, so it was reboosted and observed for 45 days.
46.	M07RA001588	7/30/2007	Livingston	Bat	There was a rabid bat in

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					a family’s living room. Three dogs were by the bat. The dogs were currently vaccinated against rabies, so they were reboosted and observed for 45 days. Her son took an unsupervised nap, so it was advised that he undergo PEP. No other animals or humans were involved.
47.	M07RA001612	8/1/2007	Wayne	Bat	A rabid bat was found in a family’s home. A person trapped the bat into the master bedroom with the cat. Another person walked into the bedroom and seen the cat staring at the bat. The cat was currently vaccinated against rabies, so it was reboosted and observed for 45 days. No humans or other animals were deemed exposed.
48.	M07RA001617	8/1/2007	Macomb	Bat	A rabid bat was found on a sticky trap fly strip on a front porch of a home. The family cat had caught a different bat and ate it earlier. The family opted to have the unvaccinated cat euthanized. No other animals or humans were deemed exposed.
49.	M07RA001631	8/2/2007	Oakland	Bat	A rabid bat was seen flying around the bedroom of the house. Two family dogs, both currently vaccinated against rabies, didn’t have contact with the bat. No humans or animals were deemed exposed.
50.	M07RA001655	8/2/2007	Newaygo	Bat	A rabid bat was found in a family’s home. It was seen flying around the home earlier. Due to unknown exposure,

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					the family underwent PEP. No other humans or animals were exposed.
51.	M07RA001656	8/2/2007	Hillsdale	Bat	A family of five awoke to a dead rabid bat with the family cat. The cat was never vaccinated against rabies, so it was euthanized. The family sleeps with their doors open, so they underwent PEP. No other humans or animals were deemed exposed.
52.	M07RA001661	8/2/2007	Livingston	Bat	A family of two awoke up to a bat flying around the bedroom as well as a cat playing with another bat. One of the bats was positive for rabies. The couple underwent PEP. As the 6 cats were currently vaccinated against rabies they were reboosted and watched for 45 days.
53.	M07RA001685	8/3/2007	Clinton	Bat	A family of four found a rabid bat when they were preparing for bed. Because of unknown exposure, all four family members underwent PEP. The family also owns one dog and one cat. Both of them were currently vaccinated against rabies, so they were reboosted and observed for 45 days.
54.	M07RA001699	8/3/2007	Barry	Bat	A family (2 adults and 1 child) awoke to a rabid bat in their home. The family members were potential exposed, so they underwent PEP. The family cat was chasing the bat. The cat was currently vaccinated against rabies, so it was reboosted and observed for 45 days.
55.	M07RA001711	8/3/2007	Osceola	Bat	Two Adults and one child awoke to find a

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					rabid bat on the bedroom floor. The family underwent PEP. The family also had a dog that was currently vaccinated against rabies. The dog was isolated from the bedroom.
56.	M07RA001722	8/6/2007	Wayne	Bat	A family (2 adults and 2 children) had a rabid bat in their home. The family was potentially exposed therefore they underwent PEP. The family dog was currently vaccinated against rabies, so it was reboosted and observed for 45 days. No other animals or humans were deemed exposed.
57.	M07RA001726	8/3/2007	Mecosta	Bat	Someone reached down to put a shoe on. A bat was in the shoe and bit the person. The person underwent PEP. No other humans or animals were exposed.
58.	M07RA001748	8/6/2007	St Clair	Bat	A family awoke to find the cat playing with a rabid bat. As the cat was not currently vaccinated against rabies it was euthanized. The family of five underwent PEP. No other humans or animals were exposed.
59.	M07RA001760	8/7/2007	Ingham	Bat	A rabid bat was found in the bedroom of a family’s home. The family was potentially exposed, so they underwent PEP. The family owned two unvaccinated cats. The family opted to vaccinate their cats against rabies and quarantined them for 6 months.
60.	M07RA001763	8/7/2007	Alpena	Bat	A rabid bat was flying around a family’s home

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					during the day. Due to unknown exposure the family all underwent PEP. The family dog may have had contact with the bat. As it was currently vaccinated against rabies, it was reboosted and observed for 45 days.
61.	M07RA001769	8/7/2007	Ingham	Bat	A small child picked up a dead rabid bat during the night thinking it was a cat toy. As the family was asleep during the incident, the family of 5 underwent PEP. The two family cats were currently vaccinated against rabies, so they were reboosted and watched for 45 days.
62.	M07RA001772	8/7/2007	Ingham	Bat	A cat brought home a rabid bat. The cat was not vaccinated against rabies, so the cat was euthanized. No other animals or humans were exposed.
63.	M07RA001784	8/7/2007	St Joseph	Bat	A family awoke to find their baby lying next to a rabid bat. The family was potentially exposed to the rabid bat at night as they were sleeping. The family of three underwent PEP. The family dog and cat may have also been exposed. The family dog was currently vaccinated against rabies, so it was reboosted and observed for 45 days. The family cat was never vaccinated against rabies, so it was recommend to euthanize the cat. The family refused. Therefore, the cat was vaccinated against rabies quarantined for 6 months.
64.	M07RA001800	8/7/2007	Kent	Bat	A bat was found in the

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					men’s bathroom at church stuck in the molding. The bat was carefully freed without human exposure. No humans or animals were deemed exposed.
65.	M07RA001806	8/7/2007	Ingham	Bat	A dead rabid bat was found in the front yard of a home where the family cat usually plays. The family cat was currently vaccinated against rabies, so it was reboosted and observed for 45 days. No humans were deemed exposed.
66.	M07RA001809	8/8/2007	Shiawassee	Bat	A woman awoke to find a rabid bat in her living room. Because of potential exposure while she slept, she underwent PEP. She also owned 4 cats that were currently vaccinated against rabies. The cats were reboosted and observed for 45 days.
67.	M07RA001821	8/9/2007	Kalamazoo	Bat	A dead rabid bat was found in a person’s garage in a cage with a cat. The garage is also used as a rescue shelter for cats. There were seven cats present at the time. Some of the cats were currently vaccinated against rabies, while others were not. As the owner refused euthanasia, the unvaccinated cats were vaccinated and quarantined for six months. The cats that were currently vaccinated were reboosted and observed for 45 days. No humans were exposed.
68.	M07RA001825	8/9/2007	Jackson	Bat	A woman found a dead rabid bat on her floor.

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					A kitten that was not vaccinated was in the home unattended. AS the owner refused euthanasia, the kitten was vaccinated and quarantined for 6 months. No other animals or humans were exposed.
69.	M07RA001836	8/9/2007	Oakland	Bat	A family woke up to a rabid bat flying around their bedroom. The family underwent PEP. The family dog was in the bedroom also. As it was currently vaccinated against rabies, it was reboosted and observed for 45 days. No other animals or humans were exposed.
70.	M07RA001843	8/9/2007	Ingham	Bat	A family woke up to a rabid bat flying in their home. The family of four underwent PEP. No other animals or humans were exposed.
71.	M07RA001850	8/9/2007	Clinton	Bat	A woman awoke to find a rabid bat flying around her bedroom. The family feared bat guano in the children’s bedrooms also. The family of 6 all underwent PEP. No animals or other humans were exposed.
72.	M07RA001855	8/9/2007	Muskegon	Bat	A woman found a rabid bat in her enclosed porch. It is possible the bat had been in the home the night prior. The woman underwent PEP. The three family cats which were currently vaccinated against rabies, were reboosted and observed for 45 days.
73.	M07RA001861	8/9/2007	Gladwin	Bat	A women walked in her bedroom to go to sleep when she discovered a rabid bat on the wall.

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					Her husband was already sleeping. The family stated that their home has many bats in it. The woman’s grandson was bit on the hand recently by another bat that they were trying to raise. That bat died and was disposed of, so it was never tested for rabies. Both she and her grandson underwent PEP for exposure to the untested bat. The husband refused to get treatment for exposure to the rabid bat.
74.	M07RA001866	8/8/2007	Newaygo	Bat	A couple awoke to a bat flying around the bedroom. The woman tried to capture the bat and was bit on the hand while doing so. The man and woman underwent PEP. The family dog, whom may have been exposed, was currently vaccinated against rabies. It was reboosted and observed for 45 days.
75.	M07RA001867	8/9/2007	Barry	Bat	A family woke up to find their cat that was not vaccinated against rabies chasing a rabid bat. The family (2 adults) underwent PEP. The owners refused euthanasia for their unvaccinated cat, so it was vaccinated against rabies and quarantined for 6 months. The family dog which also may have been exposed was currently vaccinated against rabies. It was reboosted and observed for 45 days.
76.	M07RA001901	8/9/2007	Mecosta	Bat	A rabid bat was flying around the family’s house for three days until it was caught and

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					tested. The family (2 adults) members had been vaccinated against rabies. They were reboosted 2 doses each. No other humans or animals were exposed.
77.	M07RA001920	8/10/2007	Eaton	Bat	A rabid bat was flying around a couple’s bedroom. The couple underwent PEP. The couple did not own any pets so no animals were exposed.
78.	M07RA001957	8/13/2007	Montcalm	Bat	A man was working in the basement, when a rabid bat suddenly appeared. The man opted to undergo PEP. No other humans or animals were exposed.
79.	M07RA001961	8/13/2007	Wayne	Bat	A family found their dog with a rabid bat in its mouth. The dog was currently vaccinated against rabies, so it was reboosted and observed for 45 days. It was deemed that no humans or other animals came into contact with the bat.
80.	M07RA001975	8/10/2007	Livingston	Bat	A family woke up to find a rabid bat in the mouth of one of the cats. The cat took the bat to the bathroom. The bat got away so the family sent in another cat to find it. The cat found the bat. There were 3 cats that all were currently vaccinated against rabies, so they were reboosted and observed for 45 days. Two of the family members slept with there doors open, so they received PEP. No other humans or animals were exposed.
81.	M07RA001989	8/13/2007	Clinton	Bat	A family awoke to discover three bats

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					flying around the home. One of the bats was rabid. The two family members underwent PEP. The family’s cat was reboostered and observed for 45 days.
82.	M07RA001990	8/14/2007	Clinton	Bat	Two people awoke to a rabid bat flying around the home. As one person was previously vaccinated the person received two booster vaccines. The other person received full PEP. The family pets, 1 dog and 2 cats, were currently vaccinated against rabies. They were revaccinated and observed for 45 days.
83.	M07RA001995	8/14/2007	Kent	Bat	A family awoke to find one of their two dogs with a rabid bat in its mouth. The two family members underwent PEP. Both dogs were deemed exposed. The family refused euthanasia. The dogs were not vaccinated against rabies. Both dogs were quarantined. One dog was vaccinated entering the quarantine and the other was vaccinated one month prior to the quarantine release.
84.	M07RA002013	8/14/2007	Ingham	Bat	A girl found a rabid bat under her bed. The door was closed so no one else was exposed. She underwent PEP. The family does not own any pets therefore no other humans or animals were exposed.
85.	M07RA002017	8/14/2007	Allegan	Bat	A cat caught a rabid bat and brought it to the garage. While the man tied to put the bat into a bag, the bat bit the man. The man underwent PEP. The cat was

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					currently vaccinated against rabies, so the cat was reboosted and observed for 45 days. No other animals or humans were deemed exposed.
86.	M07RA002020	8/15/2007	Eaton	Bat	A woman found a dead rabid bat that she slept on. She and her husband underwent PEP. The family owned 2 dogs that were currently vaccinated against rabies. The dogs were reboosted and observed for 45 days as they were deemed exposed. The family cat was also deemed exposed and was not currently vaccinated against rabies. The family refused euthanasia. The cat was quarantined for 6 months.
87.	M07RA002022	8/14/2007	Ingham	Bat	A woman awoke to find a rabid bat in her bedroom. The woman and her two children underwent PEP. The family pets, 1 cat and 1 dog, were currently vaccinated against rabies. As they may have been exposed, they were reboosted and observed for 45 days.
88.	M07RA002023	8/14/2007	Ingham	Bat	A man awoke to a rabid bat flying around his bedroom. He then discovered the bat in a hand towel as he dried his hands. The man underwent PEP. His two dogs were currently vaccinated against rabies. As they may have also been exposed, they were reboosted and observed for 45 days.
89.	M07RA002031	8/15/2007	Montcalm	Bat	A man was delivering

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					flowers. A rabid bat hiding in the flowers bit the man. He underwent PEP. The bat did not come into contact with any other people or animals.
90.	M07RA002040	8/15/2007	Muskegon	Bat	A woman found her cat with a bat in its mouth. The cat was not vaccinated against rabies, so it was euthanized. She also owned two dogs that were currently vaccinated against rabies, so they were reboosted and observed for 45 days. No other people or animals were deemed exposed.
91.	M07RA002045	8/15/2007	Barry	Bat	A person found her cat killing a rabid bat. As the cat was not currently vaccinated against rabies, it was euthanized. Another cat which was currently vaccinated against rabies was deemed not exposed to the bat. No other animals or humans were deemed exposed.
92.	M07RA002052	8/15/2007	Ingham	Bat	A man awoke to a rabid bat in his bedroom. He underwent PEP. No other humans or animals were exposed.
93.	M07RA002053	8/14/2007	Macomb	Bat	A couple awoke to a rabid bat in their bedroom. The family of 4 underwent PEP. No other humans or animals were deemed exposed.
94.	M07RA002054	8/15/2007	Oceana	Bat	A person found a dead rabid bat where her cat usually places dead animals. The cat was currently vaccinated against rabies. It was reboosted and observed for 45 days. No other animals or

When text cites a “rabid” animal, this implies that the animal was captured and tested positive for rabies.

					humans were deemed exposed.
95.	M07RA002058	8/15/2007	Kent	Bat	A family awoke to a rabid bat flying in there home. Because they all slept with their doors open, all five family members underwent PEP. No other humans or animals were deemed exposed.
96.	M07RA002064	8/16/2007	Kalamazoo	Bat	A family awoke to three bats flying around the home. One bat was rabid. The family of 6 (two adults and 4 children) all received PEP. The family did not own any pets.
97.	M07RA002069	8/16/2007	Washtenaw	Bat	A person awoke to find a bat in the master bathroom. The person underwent PEP. No other humans or animals were exposed.
98.	M07RA002072	8/16/2007	Washtenaw	Bat	A couple woke up to find a rabid bat in their bedroom. The couple underwent PEP. The family cat, which was currently vaccinated against rabies, was deemed exposed. It was revaccinated and observed for 45 days. No other humans or animals were deemed exposed.
99.	M07RA002073	8/16/2007	Washtenaw	Bat	Two bats were found in a co-ed fraternity. The bats were found in one person’s bedroom. The other members had their doors closed. The exposed man underwent PEP. No one else was deemed exposed. They did not have any animals.
100.	M07RA002074	8/16/2007	Washtenaw	Bat	Same as above (M07RA00273)
101.	M07RA002077	8/15/2007	Genesee	Bat	A man found a feral cat playing with a rabid bat in the front yard. The
